

Confined Space Entry/Monitor

This one day course is designed for workers who are required to enter and/or monitor entry into restricted/confined spaces.

Course Objectives:

- Identify minimum legislated standards
- Provide basic information in relation to the identification and classification of restricted/confined spaces, including their associated risks
- Explain requirements for working in or around restricted/confined spaces
- Offer recommendations and provide resource information regarding the methods used to control associated hazards
- Provide information relevant to worker entry and monitoring worker entry

Pre-requisites:

- WHMIS training is recommended.

Course Content:

- Legislated definitions of terms associated with restricted/confined space work and Codes of Practice (COP's)
- Hazard identification and assessment procedures, e.g., atmospheres which are oxygen-deficient, flammable, or toxic
- Confined space entry preparation – plans, permits, signage, entry logs

Hazard controls:

- Engineering (ventilation, isolation)
- Administrative (atmospheric testing, training, entry plans)
- Personal Protective Equipment (PPE) respirator, harness
- Roles and Responsibilities of workers, management, supervisors, confined space entry/monitors
- Emergency Response requirements
- Restricted/confined space planning requirements
- Review/Discussion about the three (3) levels of confined space as defined by the OSHA Regional Code of Practice

Certification:

- This course has a written exam component for which participants must achieve a minimum score of 80% for course certification.
- Confined Space Entry/Monitor certification will be issued on the successful completion of classroom training and testing.
- Re-certification is required every three (3) years.

Note:

- This is not a Confined Space Rescue course.
