

Hazard Management

This exciting one-day course has been strategically designed to capture the interest of attendees through the practical application and integration of theory and practice as they relate to hazard management.

Course Objective:

Effectively apply hazard management in the workplace
Place everyone on the same frame of reference

Who should attend this course?

Everyone within the construction industry including:

- Trades Personnel
- Directors
- Supervisors
- Managers
- Executives
- Owners
- Safety Professionals
- Small Employers

Pre-requisites:

Completion of Principles of Health and Safety Management (PHSM)[™] recommended.

Course Content:

- Regulatory Requirements
- Workplace Hazard/Risk Assessment and Control
- Personal and Work Site Safety
- Monitoring and Follow-Up

Design Concept:

The course design is predicated on the regulatory and legal principles that all workers:

- Have the right to know
- Have the right to participate
- Have the right to refuse

Course Delivery

This is a highly interactive course which is delivered in a classroom setting utilizing a multi-media format together with questionnaires, exercises and case studies. This course will bring construction industry stakeholders together in the pursuit of accident prevention in their workplaces
